<b>Data Limitations</b>	Testing results were entered by hand on to datasheets, and then transcribed into the database. A second person then printed proofing sheets from the database and compared each value in the database to the handwritten entry on the datasheet. Any discrepancies were corrected in the database. Reports were generated from the database in text-searchable *.pdf documents. Any data censored and the justifications for its censoring are outlined in the censoring report(s) listed in the Description block of this form.
