Title of Data	Nitrogen Isotope Data Reported by Geochron Laboratories on November 30, 1999 to GMII for EWDP Water Samples (hydrogeochemistry)					
Description of Data	An MS Excel file (GL1656.xls) contains site names, sampling dates, nitrogen stable isotopic ratio analyses (SIRA), GMII sample IDs, laboratory sample ID, pump depth (if applicable), and sample depth and method.					
Data Collection Method	First sample was bailed through drill string with HDPE disposable bailer. All other samples pumped to surface (after at least 3 well bore volumes of fluid discharged) and collected from discharge line in 1 liter HDPE bottles, labeled in field, and shipped to laboratory from office.					
Data Location(s)	Nye County Early Warning Drilling Program well sites NC-EWDP-5S, -1S, -9SX, -3S, 1DX and the Bond Gold Mining Well #13 at specified depths.					
Data Collection Period(s)	2/8/99 to 7/19/99					
Data Source(s)	Original Geochron Lab analyses in RID 1656 and GMII field geochemistry notebook.					
Data Censuring	None					
Data Processing	Laboratory performed data reduction; data compiled into spreadsheet for distribution by D.L. Shettel of GMII.					
Data Limitations	"First water of occurrence" sample (bailed) not as representative as water from later developed producing well (NC-EWDP-5SB). Sample depth represents screened interval of piezometer wells or the packed off intervals of Westbay completions. Uncertainties in SIRA measurements is plus/minus 0.1 per mil (o/oo with respect to standard).
