Title of Data	Isotopic Analyses Reported by the Institute of Geological & Nuclear Science (IGNS - New Zealand) May 30, 2001 for EWDP II Water Samples Collected October 2000 (Hydrogeochemistry)					
Description of Data	An MS Excel file (igns30may01.xls) contains site names, GMII sample IDs, sampling dates, laboratory sample IDs, total dissolved inorganic carbon, stable carbon isotopic ratios, percent modern carbon, tritium, oxygen and hydrogen stable isotopic ratio analyses (SIRA), and sampling depths.					
Data Collection Method	Water samples were collected from the discharge line of a down hole Bennett pump (after at least 3 well bore volumes of fluid discharged), and placed unfiltered into pairs of 1L low density polyethylene and glass bottles, labeled in the field, recorded in field geochemistry notebook, and shipped to laboratory from the office.					
Data Location(s)	Nye County Early Warning Drilling Program well sites NC-EWDP-5SB, -7SC, -12PA, -12PB, -12PC, -15P, -4PA, and -4PB at the specified depths.					
Data Collection Period(s)	10/23/00 to 10/26/00					
Data Source(s)	Original laboratory analyses in RID 4870 and GMII field geochemistry notebook.					
Data Censuring	none					
Data Processing	Laboratory performed data reduction; data compiled into spreadsheet for distribution by D.L. Shettel (GMII).					
Data Limitations	Sampling intervals represent the screened interval of piezometer wells or the packed off interval (sampling port in between packers) of Westbay completions. See notes below spreadsheet for analytical uncertainties.
